(f)
workload per 1,000 flows
share of pairs with FOR > ε, AnoShift
share of pairs with FOR > ε, LITNET-2020
share of pairs with FOR > ε, UGR'16
attacks let through per million flows, AnoShift
attacks let through per million flows, LITNET-2020
attacks let through per million flows, UGR'16
FORGE offline, Theorem 1
LTT, i.i.d.
conformal FNR, Şahin and Mert
best threshold up to π_{max}
under FORGE-Monitor
FORGE offline, calibration mix
LTT at the estimated prevalence, plug in
fixed threshold, selection parts
best threshold at the window's π
no monitoring
FORGE online, Theorem 1b
LTT at the estimated prevalence, upper bound
recalibration on escalated labels
best threshold for every mix up to π_{max}
